

Configure

-  General
-  Source Code Management
-  Triggers
-  Environment
-  Build Steps
-  Post-build Actions

General

Enabled

☐

Description

This Project has three steps

1. Clone Repository

2. Maven Package

3.War file to copy to Tomcat Instance

Plain text

[Preview](#)

- ☐ Discard old builds
- ☐ GitHub project
- ☐ This project is parameterized
- ☐ Throttle builds
- ☐ Execute concurrent builds if necessary

Advanced

▼

Source Code Management

Connect and manage your code repository to automatically pull the latest code for your builds.

- ☐ None
- ☒ Git

Triggers

Set up automated actions that start your build based on specific events, like code changes or scheduled times.

- ☐ Trigger builds remotely (e.g., from scripts)
- ☐ Build after other projects are built
- ☐ Build periodically
- ☐ GitHub hook trigger for GITScm polling

Poll SCM

Schedule

* * * * *

Do you really mean "every minute" when you say "* * * * *"? Perhaps you meant "H * * * *" to poll once per hour

Would last have run at Sunday, January 25, 2026 at 5:01:00 AM Coordinated Universal Time; would next run at Sunday, January 25, 2026 at 5:02:00 AM Coordinated Universal Time.

- ☐ Ignore post-commit hooks

Environment

Configure settings and variables that define the context in which your build runs, like credentials, paths, and global parameters.

- ☐ Delete workspace before build starts
- ☐ Use secret text(s) or file(s)
- ☐ Add timestamps to the Console Output
- ☐ Inspect build log for published build scans
- ☐ Terminate a build if it's stuck
- ☐ With Ant

Build Steps

Automate your build process with ordered tasks like code compilation, testing, and deployment.

Invoke top-level Maven targets

Goals

clean package

Advanced

+ Add build step

Post-build Actions

Define what happens after a build completes, like sending notifications, archiving artifacts, or triggering other jobs.

Deploy war/ear to a container

WAR/EAR files

target/*.war

Context path

myweb

Containers

Tomcat 9.x Remote
